

CloudSENSORE™

CloudSENSORE is a web-based solution which allow client to access to retrieve the sensors data, observe analysis and conduct computation . It has interesting dashboard for easy observation of all the data from sensors such as speed, torque, temperatures, pressures, flow and other important parameters will be gathered in a datalogger which streams data to the cloud. The CloudSENSORE data logger will have additional 5 slots for clients to connect their engine level measurements. These slots could accept analogue signal 0 - 10V.

CloudSENSORE will take all the data and stream to the cloud. Its comes with Amazon WebService (AWS) which will be password protected and provided to the client.

Web-based dashboard for easy Visuals

Easily accessible from any web browsers and from anywhere from the world

Data pushed to CloudSENSORE AWS account for easy viewing, sharing, posting and control

Inclusive with industry standard datalogger for data collection and streaming

CloudSENSORE Controller Package

Datalogger Box with built-in signal processing to web streaming

Junction box which can be customize with user required termination type

User friendly web based dashboard for visual, analysis and control

Amazon Web Services Data Storage

Data is safely stored to our cloud servers!
Never lose your data ever!

test results are pushed to CloudSENSORE automatically

Run multiple dyno displays in easy visual modes
